How Advanced Rotational Molding™ Makes Toter Carts Superior

Toter's engineers and designers developed a revolutionary breakthrough in rotational molding known as Advanced Rotational Molding™ to create the toughest carts that outlast the competition.

The process eliminates weakness, brittleness, and poor impact resistance associated with injection-molded plastic products. Toter's Advanced Rotational Molding™ process creates a stronger cart that is built for toughness and maximum impact resistance. Toter products are built to keep working after others fail. That's why there's no two wheel cart that's built to last like a Toter.

Advantages of Advanced Rotational Molding:

- Superior toughness and durability
- Single-piece product design – no seams
- Consistent wall thickness
- Stress-free, zero-pressure product
- Unique design and structural capabilities like Rugged Rim®, sealed stop bar journals, and granite finish
- UV stable
- Custom colors
- Corrosion- and chemical-resistant
- Ability to mold in graphics
